Morse Micro

Re: 2025 Graduate Program

Hello

I'm writing to apply for the Morse Micro Graduate Program. As a final year mechanical engineering student studying part time at the University of Sydney, I have a background in computational modelling, programming and hands on hardware development.

My experience spans across several domains. At Sydney Motorsports, I led a team of ten student engineers in the design to manufacturing process of a full aerodynamics package using SolidWorks, ANSYS Fluent and small volume production techniques such as 3D printing, laser cutting and pomposite layups. The role requires managing and modifying large assemblies and delivering projects under strict time limits. During my internship at Dovetail Electric Aviation, I applied my CFD abilities in ANSYS Fluent to optimize and validate a propeller nacelle assembly as well as conduct cooling duct geometry optimization to minimize drag and improve cooling.

Alongside these roles, I've pursued independent projects in my spare time such as prototyping a six-axis robotic arm with custom cycloidal gearboxes, engineered an ergonomic 32 gram ultralight PC mouse, and running a homelab server to provide me with a custom cloud storage and media server solution.

Morse Micro gives me an opportunity to combine my interest in technology and elegant engineering design within a multidisciplinary team and learn from established engineers. Thanks for considering my application and I look forward to discussing the opportunity with you further.

Sincerely,
Winston Zhang
